BACKGROUND

Description

D52-like (TPD52L1) protein is a member of D52 gene family and overexpressed in human breast carcinoma. This protein contains coiled-coil motif, which is responsible for homo- and heteromeric interaction, and may be regulators of cell proliferation and calcium-mediated signal transduction.

DATA

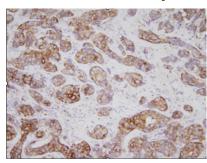

Flow cytometry (FACS)

Alexa488-anti-TPD52L1

Flow cytometry analysis of TPD52L1 in A431 cell line, staining at 2-5ug for 1x10^6cells (red line). The secondary antibody used goat antimouse IgG Alexa fluor 488 conjugate. Isotype control antibody was mouse IgG (black line).

Immunohistochemistry (IHC)

Human gastric cancer tissues were incubated with anti-human TPD52L1 (1:200) for o/n at room temperature. Slides were then washed in PBS, and were incubated in avidin biosystem anti-rabbit labeled polymer for 30 min at RT. Enzyme detection was performed with DAB chromogen.
