# **PRODUCT INFORMATION**

Catalog number ATGA0268

Clone No. AT12D11

**Product type** Monoclonal Antibody

**UnitProt No.** P55083

NCBI Accession No. NP\_002395

## **Alternative Names**

microfibrillar-associated protein 4, microfibrillar-associated protein 4, Microfibril associated glycoprotein 4, Microfibril-associated glycoprotein 4

# **PRODUCT SPECIFICATION**

Antibody Host Mouse

Reacts With Human

**Concentration** 1mg/ml (determined by BCA assay)

#### Formulation

Liquid in. Phosphate-Buffered Saline (pH 7.4) with 0.02% Sodium Azide, 10% glycerol

## Immunogen

Recombinant human MFAP4 (22-255aa) purified from E. coli

# Isotype

lgG1 kappa

**Purification Note** By protein-A affinity chromatography

# Application

ELISA,WB

## Usage

The antibody has been tested by ELISA and Western blot analysis to assure specificity and reactivity. Since application varies, however, each investigation should be titrated by the reagent to obtain optimal results.

#### Storage

Can be stored at +2C to +8C for 1 week. For long term storage, aliquot and store at -20C to -80C. Avoid repeated freezing and thawing cycles.

# BACKGROUND

### Description

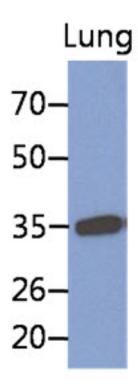

Several microfibril associated proteins (MFAPs) have been cloned, including MFAP1, MFAP3 and MFAP4. The MFAP1 and MFAP3 genes are localized near the fibrillin genes FBN1 and FBN2, respectively. Mutations in FBN1 are linked to Marfan syndrome. Mutations in FBN2 have been linked to congenital contractural arachnodactyly. This suggests roles for MFAP1 and MFAP3 in heritable diseases affecting microfibrils. Deletion of MFAP4 was found in 30 of 31 patients with Smith-Magenis syndrome (SMS), a clinically recognizable multiple congenital anomaly/mental retardation syndrome. Also, MFAP4 play an important role in calcium-dependent cell adhesion or intercellular interactions. These structural features of MFAP4 suggest that it is an extracellular matrix protein involved in cell adhesion or intercellular interactions.

## DATA

#### Western blot analysis (WB)

The tissue lysate of lung (30ug) was resolved by SDS-PAGE, transferred to PVDF membrane and probed with anti-human MFAP4 antibody (1:1000). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system.
