RPS5 cDNA

Catalog Number: ATGD0334

RPS5 encodes a ribosomal protein that is a component of the 40S subunit. It belongs to the S7P family of ribosomal proteins and is located in the cytoplasm. Variable expression of this gene in colorectal cancers compared to adjacent normal tissues has been observed, although no correlation between the level of expression and the severity of the disease has been found. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome.
