Vector description

This shuttle vector contains the complete ORF. It is inseted BamH I to Xho I. The gene insert contains multiple cloning sites which can be used to easily cut and transfer the gene and recombination site into your expression vector.

Cloning Vector

pATGen (puc19-derived cloning vector)

General Description

RPL32 is a ribosomal protein that is a component of the 60S subunit. The protein belongs to the L32E family of

ribosomal proteins. RPL32 is located in the cytoplasm. Although some studies have mapped this gene to 3q13. 3-q21, it is believed to map to 3p25-p24. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome. Alternatively spliced transcript variants encoding the same protein have been observed for RPL32.
