Recombinant human Hexokinase 4 protein

Catalog Number: HXK0702

PRODUCT INFORMATION

Expression system
E.coli

Domain
1-465aa

UniProt No.
P35557

NCBI Accession No.
NP_000153

Alternative Names
GCK, glucokinase, MODY2, Maturity onset diabetes of the young 2, Hexokinase 4, HK4, Hexokinase type IV, HK IV, Hexokinase-D

PRODUCT SPECIFICATION

Molecular Weight
54.3 kDa (485aa)

Concentration
1mg/ml (determined by Bradford assay)

Formulation
Liquid in. 20mM Tris-HCl buffer (pH 8.0) containing 10% glycerol

Purity
> 95% by SDS-PAGE

Tag
His-Tag

Application
SDS-PAGE

Storage Condition
Can be stored at +2C to +8C for 1 week. For long term storage, aliquot and store at -20C to -80C. Avoid repeated freezing and thawing cycles.

BACKGROUND

Description
Hexokinase is the first enzyme in the glycolytic pathway, catalyzing the transfer of a phosphoryl group from ATP to glucose to form glucose-6-phosphate and ADP. In mammals, four distinct enzymes-types 1 to 4 hexokinases-have been identified. The enzyme is found in most cells, but there is tissue specificity for the particular type of hexokinase. Hexokinase4 is found in the liver and pancreatic beta-cells, where it is controlled by insulin (activation) and glucagon (inhibition). In pancreatic beta-cells, type IV enzyme acts as a glucose sensor to

modify insulin secretion. Hexokinase4 is commonly called glucokinase. Recombinant human Hexokinase4, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography techniques.
