BACKGROUND

Description

Thioredoxin (Trx) is a low molecular weight redox protein. Trx contains a redox active disulfide/dithiol group within the conserved Cys-Gly-Pro-Cys active site. It is involved in the first unique step in DNA synthesis. Trx also provides control over a number of transcription factors affecting cell proliferation and death through a

mechanism referred to as redox regulation. Recombinant human TXN protein, fused to His-tag at N-terminus, was overexpressed in *E. coli* and purified by using conventional chromatography techniques.
