

Recombinant human Crystallin mu/CRYM protein

Catalog Number: ATGP0559

PRODUCT INFORMATION

Expression system

E.coli

Domain

1-314aa

UniProt No.

Q14894

NCBI Accession No.

NP_001879

Alternative Names

Crystallin mu, Ketimine reductase mu-crystallin, NADP-regulated thyroid-hormone-binding protein, Thiomorpholine-carboxylate dehydrogenase, mu-crystallin, DFNA40, THBP

PRODUCT SPECIFICATION

Molecular Weight

35.9 kDa (334aa) confirmed by MALDI-TOF

Concentration

1mg/ml (determined by Bradford assay)

Formulation

Liquid in. 20mM Tris-HCl buffer (pH 8.0) containing 1mM DTT, 10% glycerol

Purity

> 95% by SDS-PAGE

Tag

His-Tag

Application

SDS-PAGE

Storage Condition

Can be stored at +2C to +8C for 1 week. For long term storage, aliquot and store at -20C to -80C. Avoid repeated freezing and thawing cycles.

BACKGROUND

Description

Crystallin mu, also known as CRYM, is a member of the crystallin protein family. Crystallins are separated into two classes, taxon-specific and ubiquitous. This gene encodes a taxon-specific crystallin protein. The human CRYM gene maps to chromosome 16p13. 11, and encodes a protein that is expressed in neural tissue, muscle, and kidney. Unlike other crystallins, CRYM does not perform a structural role in lens tissue, but rather it binds NADPH and thyroid hormone, which indicates that it may have other regulatory or developmental functions.

Recombinant human Crystallin mu/CRYM protein

Catalog Number: ATGP0559

Recombinant human CRYM, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography techniques.
