BACKGROUND

Description

MAPT, also known as TAU, is a neuronal microtubule associated protein found predominantly on axons. The function of this protein is to promote tubulin polymerisation and stabilise microtubules, but it also serves to link certain signalling pathways to the cytoskeleton. MAPT, in its hyperphosphorylated form, is the major component of paired helical filaments (PHF) and neurofibrillary lesions in Alzheimer's disease (AD) brain. Recombinant

Recombinant human Tau 352 (0N3R)/MAPT protein

Catalog Number: ATGP0646

human MAPT protein, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography techniques
