BACKGROUND

Description

Phosphatidylinositol transfer protein beta isoform, also known PITPNB, is found in the cytoplasm, where it catalyzes the transfer of phosphatidylinositol (PI) and phosphatidylcholine (PC) between membranes. PITPNB mobilizes PI from the endoplasmic reticulum and regulates the release of PI from stored vesicles in the Golgi network. PITPNB is widely expressed in various tissues. Recombinant human PITPNB protein, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography techniques.
