BACKGROUND

Description

PTRH2 (peptidyl-tRNA hydrolase 2), also known as BIT1, is a mitochondrial protein. During apoptosis, PTRH2 is released from the mitochondria to the cytoplasm. Once in the cytoplasm, PTRH2 regulates the function of two transcriptional regulators, TLE5 and TLE1, thereby promoting caspase-independent cell death. The natural substrate for PTRH2 may be peptidyl-tRNAs which drop off the ribosome during protein synthesis. Recombinant human PTRH2 protein was expressed in E. coli and purified by using conventional chromatography techniques.
