

Recombinant human Transgelin 2/TAGLN2 protein

Catalog Number: ATGP0938

PRODUCT INFORMATION

Expression system

E.coli

Domain

13-199aa

UniProt No.

P37802

NCBI Accession No.

NP_003555

Alternative Names

Transgelin-2, HA1756, KIAA0120, Transgelin 2, SM22-alpha homolog, Epididymis tissue protein Li 7e

PRODUCT SPECIFICATION

Molecular Weight

23.4 kDa (208aa) confirmed by MALDI-TOF

Concentration

1mg/ml (determined by Bradford assay)

Formulation

Liquid in. 20mM Tris-HCl buffer (pH 8.0) containing 20% glycerol, 0.1M NaCl, 1mM DTT

Purity

> 90% by SDS-PAGE

Tag

His-Tag

Application

SDS-PAGE

Storage Condition

Can be stored at +2C to +8C for 1 week. For long term storage, aliquot and store at -20C to -80C. Avoid repeated freezing and thawing cycles.

BACKGROUND

Description

TAGLN2, also known transgelin 2, is one of the earliest markers of differentiated smooth muscle. This protein contains a calponin like repeat and a calponin-homology (CH) domain. It is downregulated in several transformed cell lines, indicating that a reduction of transgelin expression may be an early indicator of the onset of transformation. It also binds actin, causing actin fibers to gel within minutes of binding. Binding of transgelin to actin occurs at a ratio of 1:6 actin monomers. Recombinant human TAGLN2 protein, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography.

DATA

SDS-PAGE

3 μ g by SDS-PAGE under reducing condition and visualized by coomassie blue stain.
