#### **BACKGROUND**

#### **Description**

MAP2K3, also known as dual specificity mitogen-activated protein kinase kinase 3, is a dual specificity protein kinase that belongs to the MAP kinase kinase family. This kinase is activated by mitogenic and environmental stress, and participates in the MAP kinase-mediated signaling cascade. It phosphorylates and thus activates MAPK14/p38-MAPK. This kinase can be activated by insulin, and is necessary for the expression of glucose transporter. Recombinant human MAP2K3 protein, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography.
