BACKGROUND

Description

RND1, also known as Rho 6, is Rho-related GTPases form a distinct branch of the Rho family, since they differ from other Rho proteins in size, charge, and biochemical properties. It appears to be constitutively in the activated GTP-bound form and acts as negative regulators of actin assembly and of cell adhesion. It contributes to regulating the organization of the actin cytoskeleton in response to extracellular growth factors. Recombinant human RND1 protein, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography.
