BACKGROUND

Description

Alpha-1-microglobulin, also known as AMBP, is an immunomodulatory protein with a broad spectrum of possible clinical applications and seems a promising marker for evaluation of tubular function. AMBP specifically interacts with the ORF3 protein of hepatitis E virus and has a direct role in enhancing alpha-1 microglobulin export from the hepatocyte. Recombinant human AMBP protein, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography techniques.
