BACKGROUND

Description

ACOT7 is a member of the acyl coenzyme family. This protein hydrolyzes the CoA thioester of palmitoyl-CoA and other long-chain fatty acids. Decreased expression of this protein may be associated with mesial temporal lobe epilepsy. Alternatively spliced transcript variants encoding distinct isoforms with different subcellular locations have been characterized. Recombinant human ACOT7 protein, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography techniques.
