#### **BACKGROUND**

#### **Description**

PIP4K2B catalyzes the phosphorylation of phosphatidylinositol-4-phosphate on the fifth hydroxyl of the myoinositol ring to form phosphatidylinositol-4, 5-bisphosphate. It is a member of the phosphatidylinositol-4phosphate 5-kinase family. The amino acid sequence of PIP4K2B does not show similarity to other kinases, but the protein does exhibit kinase activity. Additionally, PIP4K2B interacts with p55 TNF receptor. Recombinant human PIP4K2B protein, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography techniques.
