BACKGROUND

Description

Lamp2, also known as lysosome-associated membrane glycoprotein 2, is a major component of lysosomal membranes. It is clinically characterized by cardiomyopathy, myopathy, and variable mental retardation. Up-regulated Lamp2 at the plasma membrane serves as an indicator of cell activation of CD8+ T cells, mast cells,

monocytes, and platelets. Recombinant mouse Lamp2, fused to His-tag at C-terminus, was expressed in insect cell and purified by using conventional chromatography techniques.
