# Recombinant human Lactate Dehydrogenase B/LDHB protein

Catalog Number: ATGP3387

#### **BACKGROUND**

#### **Description**

LDHB, also known as L-lactate dehydrogenase B chain isoform LDHB, is a member of the lactate dehydrogenase family. It is an oxidoreductase which catalyses the interconversion of pyruvate and lactate with concomitant interconversion of NADH and NAD+. As this protein can also catalyze the oxidation of hydroxybutyrate. The LDH family consists of three members, LDH-A, LDH-B and LDH-C. LDHs function as powerful markers for germ cell tumors. Recombinant human LDHB protein was expressed in E. coli and purified by using conventional chromatography techniques.
