BACKGROUND

Description

Agr2, also known as anterior gradient protein 2 homolog, is the orthologue of the secreted *Xenopus laevis* Anterior Gradient protein (XAG-2). This is a small, possibly secreted molecule of yet weakly defined functions that is widely expressed in human tissues. Expression of Agr2 shows a positive correlation with expression of estrogen receptor in breast carcinoma and a negative correlation with expression of EGF receptor. Recombinant mouse Agr2, fused to His-tag at N-terminus, was expressed in *E. coli* and purified by using conventional chromatography techniques.
