BACKGROUND

Description

TNFRSF12A, also known as tumor necrosis factor receptor superfamily member 12A, is the sole signaling receptor for the proinflammatory cytokine TWEAK (TNFSF12). It is a Downstream Target of the TGF- β Signaling Pathway and regulates Fibroblast Activation. It promotes oxidative stress through NADPH oxidase activation in

macrophages. It is responsible for TWEAK-induced proliferation of endothelial cells and angiogenesis. Recombinant human TNFRSF12A, fused to hlgG-His-tag at C-terminus, was expressed in insect cell and purified by using conventional chromatography techniques.
