BACKGROUND

Recombinant rat IL-6 protein

Catalog Number: ATGP3711

Description

IL6, also known as interleukin 6, is an alpha-helical phosphorylated and glycosylated cytokine. This protein is important roles in the acute phase reaction, inflammation, hematopoiesis, bone metabolism and cancer progression. Also, it can function as an anti-inflammatory molecule, as in skeletal muscle where it is secreted in response to exercise. In addition, it enhances hematopoietic stem cell proliferation and the differentiation of Th17 cells, memory B cells, and plasma cells. Recombinant rat IL6, fused to His-tag at C-terminus, was expressed in insect cell and purified by using conventional chromatography techniques.
